

F-Secure Mobile Security 5 for Business

Smartphones are small computers and face many of the same threats as workstations and laptops. Mobile malware and spyware pose extra security risks for businesses, lowering productivity and causing business continuity problems. If the phone is lost or stolen, you need to be sure that your confidential business information cannot be misused by anyone. F-Secure Mobile Security for Business offers total protection for business smartphones and also provides centralized protection monitoring for IT administrators.

Instant protection against loss or theft

Mobile phones can easily be lost or stolen – so it's important that you have a way to protect and remotely control the device. F-Secure Mobile Security introduces the new advanced Anti-theft feature with Remote Lock, Remote Wipe and Theft Control functionalities. Remote Lock can be used to lock the device to protect confidential information quickly and easily with a single SMS message. The Theft Control feature activates when the SIM card is changed by locking the device. As an ultimate safety measure to prevent misuse, it is possible to erase all the data on the phone with Remote Wipe. You can be sure that your personal and confidential information won't be misused by anyone.

Features you can rely on

The solution works invisibly in the background, scanning all network traffic and monitoring the device for malware. The application combines real-time antivirus functionality with a firewall, anti-theft and anti-spyware, making the device completely safe for today's connected life.

F-Secure Mobile Security automatically retrieves the newest updates whenever any data connection is used. An additional SMS update mechanism patented by F-Secure ensures that critical malware fingerprints are received even when a data connection is not available.

Centralized management and monitoring

IT administrators can centrally monitor the protection status of the company smartphones by using the F-Secure Mobile Services portal. The administrator can easily add smartphones into the wireless Mobile Security service, send the service activation code as an SMS message directly to the phones, and monitor the service subscription status with a standard web browser.

Protects you against:

- > Misuse of confidential information in case the phone is lost or stolen
- > Mobile spyware monitoring your phone usage
- > Unwanted billing caused by viruses that are trying to spread
- > The device becoming unusable due to malware

F-Secure Mobile Security key features

Anti-theft

If your phone is lost or stolen, F-Secure Mobile Security helps to safeguard your personal and confidential data. The Anti-theft offers three new features to keep your data safe: remote locking, remote wiping and theft control.

Antispyware

Protects against spyware and espionage software that may monitor and record all the actions on a mobile phone, including voice calls, SMS, multimedia and e-mail messages.

Antivirus and customizable Firewall

Combined real-time antivirus protection with a customizable firewall makes the device completely safe against mobile viruses and malware.

Smooth user experience

Security has never looked better. The new smooth user interface is all about making security easy.

Unique advanced automatic updates

A unique 2-layer update mechanism automatically retrieves the newest updates whenever any data connection is used. Advanced SMS updates ensure that you receive the critical updates even when a data connection is not available.

Light and Efficient

Thanks to light and efficient scanning technology, F-Secure Mobile Security gives you full protection without affecting the smartphone user experience.

Support for all the most popular smartphones

All popular smartphone models are supported – over 150 different Windows Mobile and Symbian devices from all the major vendors like Nokia, Sony Ericsson, Toshiba, Motorola, HTC, Samsung and co-branded devices. The full list is available at <http://f-secure.mobi>

Central management

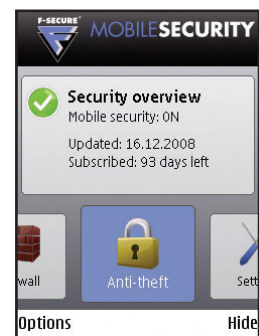

Centralized management makes it easy for an IT administrator or operator to monitor the protection status of all the smartphones in the service.

Central management features:

- > www-based user interface
- > Management of subscriber information
- > View subscriber device information and update log
- > Search subscribers based on different criteria
- > Import subscribers to contracts
- > Download client applications and user documentation
- > Send license SMS to subscribers (activation SMS)
- > Provide detailed reporting

Supports the device management standard defined by Open Mobile Alliance (OMA)

Administrators can use the Device Management system to perform complicated or repetitive management tasks over the air on behalf of the end user. For example, Nokia Intellisync and mFormation Device Management can be used as device management platforms to manage F-Secure Mobile Security for Business
